

Échelon™

Model CLRCO2075 Clear Ice Maker/Refrigerator

Custom 1/4" Door Panel: 28-5/32" H x 23-1/32" W (71.5 cm x 58.5 cm)
 3/4" Full Overlay Panel: 29-7/8" H x 23-3/4" W (75.9 cm x 60.3 cm)

See Overlay Door Panel Preparation Instructions

The industry's only built-in, under the counter combination clear ice maker/refrigerator which produces up to forty (40) pounds of clear ice per day and stores fifteen (15) pounds.

EXCLUSIVE FEATURES OF ÉCHELON™

- High daily ice production, ice storage, and refrigerator capacity**
BENEFIT: Produces up to 40 pounds of ice per day and stores up to 15 pounds. Refrigerator section is a generous 2.5 cubic feet.
- Optional full overlay door capability (panel kit) using a 3/4 inch thick panel**
BENEFIT: Provides a fully integrated appearance with surrounding cabinets. Overlay panel is easily attached to the door.
- Automatic electronic control module that controls daily ice production**
BENEFIT: Maximizes the daily ice production by monitoring and automatically making adjustments for changes in the ambient room and water temperatures. Provides for a consistently shaped ice cube.
- Easy to set, adjustable, LED temperature controller**
BENEFIT: Digital readout of temperature setting and actual refrigerator section temperatures. Easy ability to see and adjust to desired temperature.
- Three fully encapsulated, contoured, spill proof shelves**

BENEFIT: Upscale appearance that contains spills to one shelf. Easy to clean. Stylized, etched bottom shelf.

- Two adjustable, contoured, self contained inner door "pick-off" shelves**
BENEFIT: These highly stylized shelves are adjustable for the storage of a variety of different bottle, can, and container sizes and shapes thereby providing optimum space utilization and flexibility. The self contained shelves can be removed and used to transport their contents to other cooking areas in the home or outside patio.
- Indented or recessed shelf channels support the encapsulated shelves**
BENEFIT: Provides a sleek, clean appearance to the interior of the refrigerator section by eliminating protruding shelf supports. Also provides a more secure, rigid fit for the encapsulated shelves.
- Consumer friendly, self diagnosing controller**
BENEFIT: In the rare event of a problem, a flashing LED indicator light explains if there is a need to call for service.

SUPERIOR FEATURES OF ÉCHELON™

1. **Self closing door hinges are engaged when door is open approximately 8-10 inches**

BENEFIT: Ensures a positive door seal and prevents door bounce back.

2. **"L" shaped door hinges**

BENEFIT: This hinge design provides greater door support thereby permitting larger and heavier door panels and full overlay doors to be utilized.

3. **A slightly contoured, across the top, integrated door handle design for black and white models**

BENEFIT: The contoured shape maintains the stylized shape of the Echelon series plus permits full door field reversibility on black and white units.

4. **Easy, self cleaning process for the clear ice maker**

BENEFIT: Eliminates any complicated procedures or time consuming process in order to clean the ice maker. Just empty the ice bin, turn the switch to "Clean," and add the U-Line cleaner fluid after the water reservoir fills. In approximately 45 minutes, the ice maker has automatically completed a series of cleaning and rinsing cycles and is ready to start producing ice once the switch is turned to the "Ice" position.

5. **Seven (7) inch drain height extending from the rear of the CLRCO2075**

BENEFIT: Allows for more installation flexibility in the respect that the higher the drain height, the

further the CLRCO2075 can be located from the gravity feed drain.

6. **Drain pump available when access to a gravity drain is not an option**

BENEFIT: The P60 drain pump is specifically designed for U-Line clear ice makers. It is a fully sealed pump that contains "automatic shut-off logic." Both features reduce the risk of water overflow in the event of drain back-up or unit malfunction.

7. **Flat, recessed, front grille**

BENEFIT: Greater toe kick space. The grille design shields the interior motor compartment and all electrical components from view.

8. **Stainless steel units have a seamless full wrap stainless steel cabinet and door with sculpted, contoured handle**

BENEFIT: The seamless full wrap stainless steel door with sculpted handle distinguish this unit from heavier, "commercial" looks. All stainless units must be ordered either right or left hand hinged and are not field reversible.

9. **Field reversible doors (except stainless steel)**

BENEFIT: Greater flexibility where the unit can be installed and allows for side-by-side applications.

ADDITIONAL FEATURES

1. Automatic Defrost
2. Built-in or freestanding
3. All doors (except stainless steel) accommodate a 1/4 inch thick custom panel. All doors come standard with a flush black or white factory installed panel.
4. Interior light in refrigerator section
5. Vinyl clad steel cabinet (black/white)
6. Adjustable leveling legs.
7. Available in black, white, and stainless steel.

BENEFITS

Maintenance free defrosting.

Provides custom look. No additional clearance around sides, top, or rear for ventilation. **Do not obstruct front grille.**

Standard feature to achieve a custom, built-in look matching surrounding cabinets.

Automatically illuminates when door opens.

Textured rich look. More resistant to scratching, peeling, and flaking.

More precise under the counter fit, durable – factory installed.

Blends with all cabinet colors
